ASSIGNMENT-1

Long Term Virtual Internship – Data Analytics with Tableau

- **Purpose:** Compare total sales (SUM of Total) across different Product Lines. Identify which product line has higher or lower sales Help in business decision-making, like focusing on top-selling products.

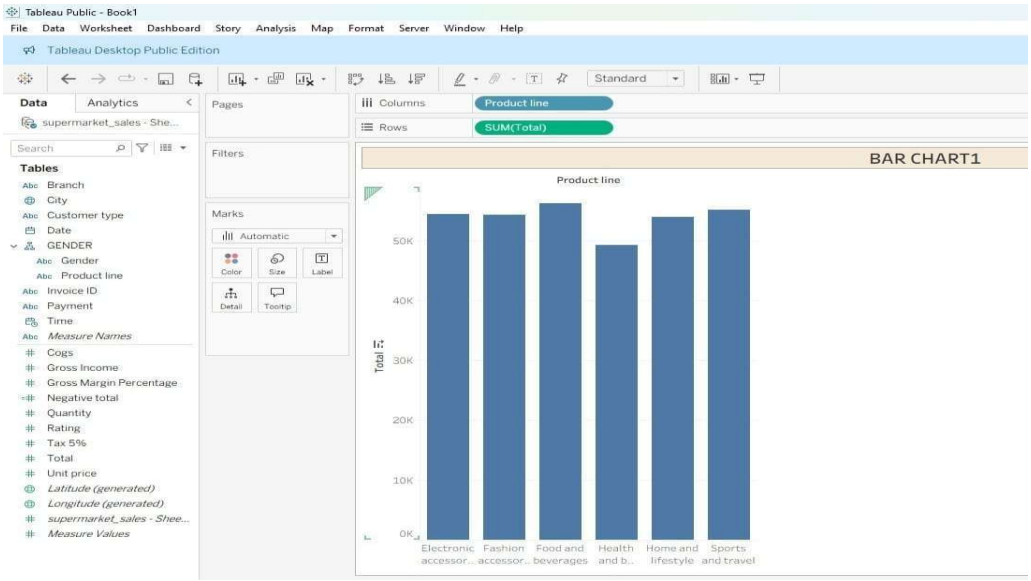
1.Prepare Bar Chart

- Step 1: Open Tableau Open Tableau Public / Tableau Desktop Connect to the dataset super market sales
- Step 2: Open a New Worksheet Click on Worksheet 1
- Step 3: Drag Dimensions and Measures Drag Product line → to Columns Drag Total → to Rows Tableau automatically applies SUM(Total)
- Step 4: Choose Bar Chart in the Marks card: Select Bar (or keep Automatic, Tableau selects Bar chart)
- Step 5: Format the Chart (Optional) Add Chart Title → BAR CHART1 Adjust colors if needed Resize bars for better visibility
- Step 6: Analyze the Chart Each bar represents a Product Line Height of the bar shows Total

Sales You can clearly compare sales across categories

Output:

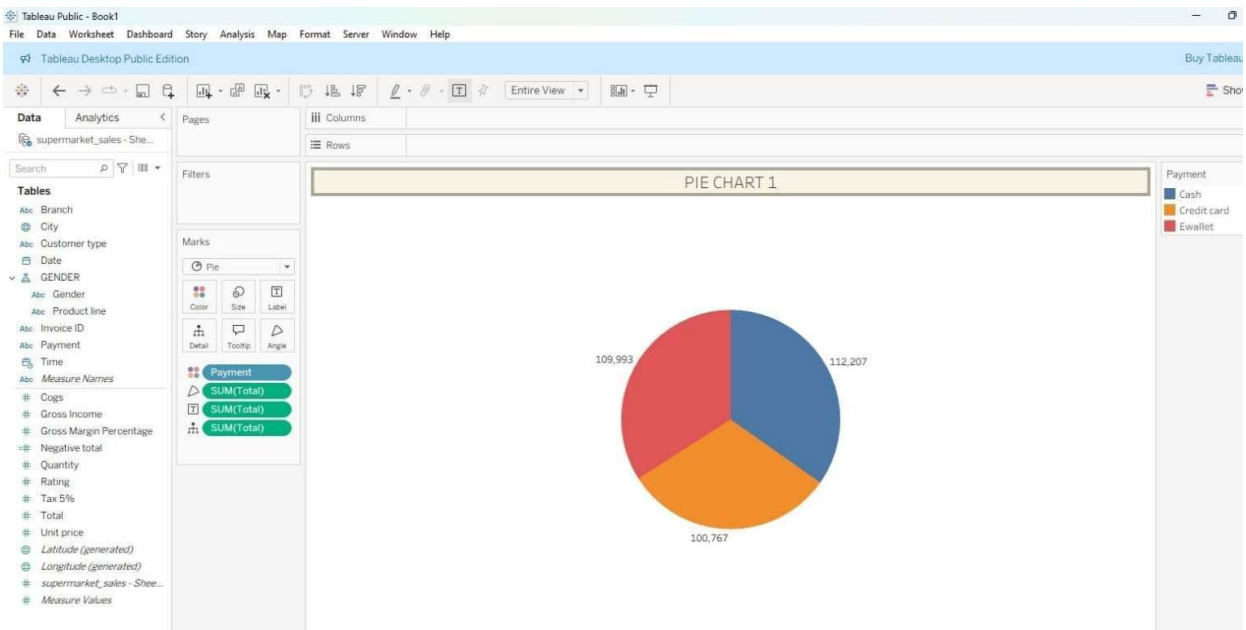
Bar chart:



2.Prepare pie chart:

- Step 1: Open Tableau Open Tableau Public / Tableau Desktop Connect to the dataset super market sales
- Step 2: Open a New Worksheet Click on Worksheet
- Step 3: Change Marks Type In the Marks card, change Automatic to Pie
- Step 4: Drag Fields to Marks Drag Payment → to Color Drag Total → to Angle Drag Total
  → to Label Drag Total → to Size Make sure aggregation is SUM(Total)
- Step 5: Format the Chart (Optional) Increase pie size using Size Show data labels (values or percentages) Add chart title → PIE CHART 1 Adjust colors for better clarity
- Step 6: Analyze the Chart Each slice represents a payment method Slice size shows total sales amount larger slice = more usage of that payment method

Pie chart:

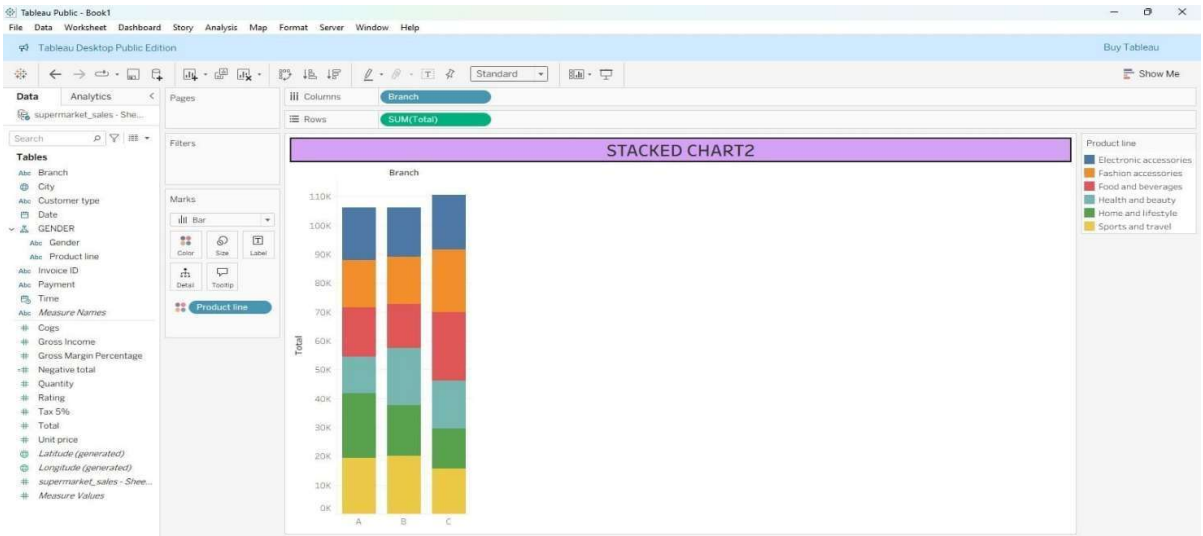


3.Prepare Stacked Bar Chart:

- Step 1: Open Tableau Open Tableau Public / Tableau Desktop Connect to the dataset super market sales
- Step 2: Open a New Worksheet Click on a new Worksheet
- Step 3: Drag Fields to Shelves Drag Branch → to Columns Drag Total → to Rows Tableau applies SUM(Total) automatically
- Step 4: Create Stacked Bars in the Marks card: Select Bar Drag Product line → to Color
- Step 5: Enable Stacking (if needed) Go to Analysis → Stack Marks → On
- Step 6: Format the Chart Add title → STACKED CHART2 Adjust colors for each product line Resize bars for clarity

- Step 7: Analyze the Chart Each bar represents a Branch (A, B, C) Each color segment shows a Product Line Total height of bar = Total Sales of that branch.

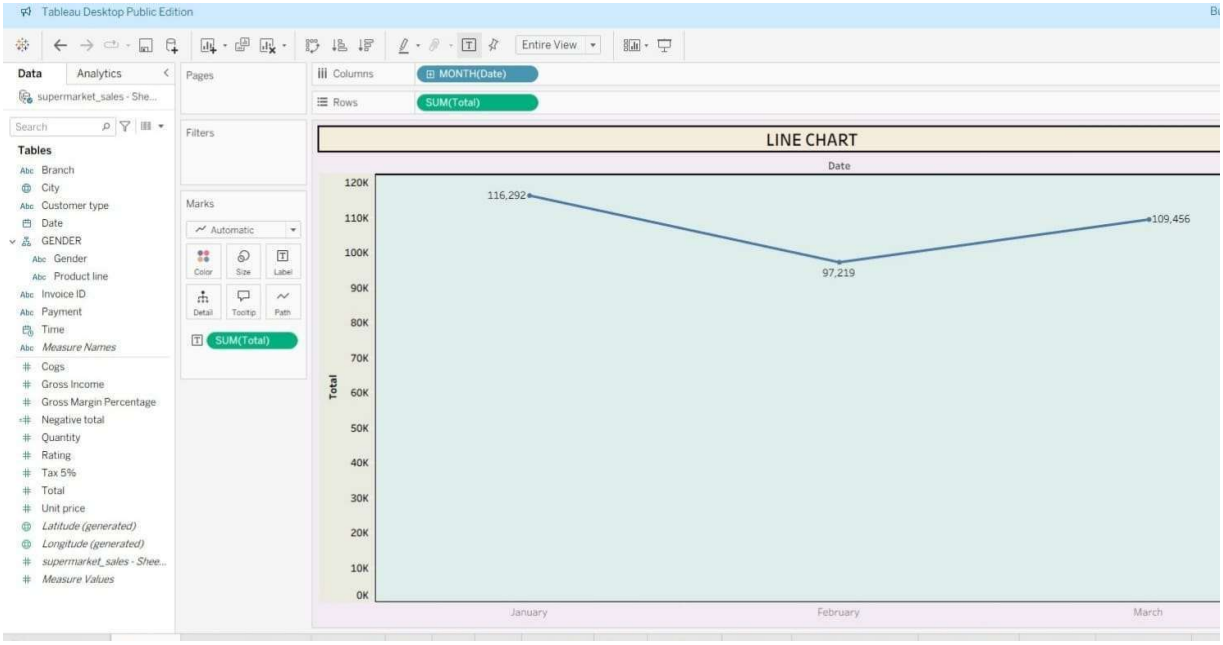
Stacked Bar Chart:



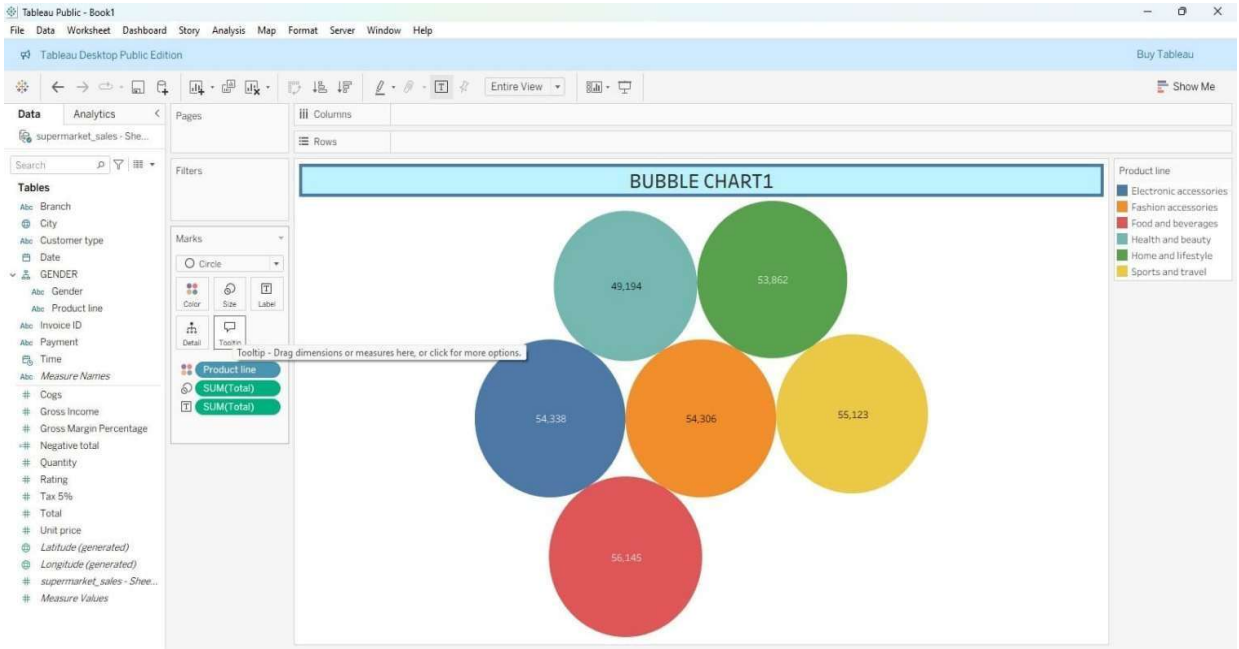
4.Prepare Line Chart:

- Step1: Open Tableau and drag the “super market sales” data set onto the canvas.
- Step2: Drag the “Date” field onto the Columns shelf and convert it to MONTH(Date) using the blue pill option.
- Step3: Drag the “Total” field onto the Rows shelf and apply the SUM aggregation.
- Step4: In the Show Me panel select the line chart (or let Tableau automatically assign it).
- Step5: Set the Marks card to “Automatic” and optionally add Label to display exact values on the line.
- Step6: Drag relevant dimensions (e.g., Branch, City) to the Filters shelf if you want to narrow the analysis.
- Step7: Enable Tooltip or adjust formatting (colors, size) for better readability.

Line Chart:



Prepare Bubble chart:

- Step1: Open Tableau and connect to your dataset (here, “supermarket
- Step2: Drag “Product line” to *Color shelf*. Assigns each product line a unique color for differentiation.
- Step3: Drag “SUM(Total)” to *Size shelf* determines the size of each bubble based on total sales.
- Step4: Drag “SUM(Total)” again to *Label shelf*displays the total sales value inside each bubble sales”).
- Step5: Change mark type to *Circle (bubble)* Converts the visualization into a bubble chart.
- Step6: Place “Product line” on *Detail (optional)* Ensures each bubble represents a distinct product line.
- Step7: Adjust layout & title: Add a title (“BUBBLE CHART1”) and format as needed.


Bubble chart:
