Project Design Phase-II
Data Flow Diagram & User Stories

Date	14 February 2026
Team ID	LTVIP2026TMIDS36692
Project Name	Project-Strategic product placement analysis: Unveiling sales impact with tableau visualization
Maximum Marks	4 Marks

Data Flow Diagrams:

The Data Flow Diagram (DFD) clearly explains the logical flow of data throughout the project Strategic Product Placement Analysis: Unveiling Sales Impact with Tableau Visualization. It highlights how data moves between different stages of the system and how each module contributes to the final outcome.

Initially, sales and product placement data are collected from various sources such as datasets, spreadsheets, or databases. This raw data is passed to the Data Collection and Extraction module, where relevant fields are extracted and stored in a structured format. The extracted data is then forwarded to the Data Preparation stage, which involves data cleaning, removal of duplicates, handling missing values, data transformation, and creation of calculated fields to support analysis.

Once the data is prepared, it flows into the Tableau Visualization module. Here, charts, graphs, and analytical views are created to study the impact of product placement on sales performance. These visual elements are combined into an interactive dashboard, allowing users to filter and analyze data dynamically. Finally, the dashboard and story are published through deployment (Tableau Public), making insights accessible for decision-making and project demonstration.

Overall, the DFD ensures transparency, improves understanding of system processes, and helps in identifying efficient data handling and analysis workflows within the project..

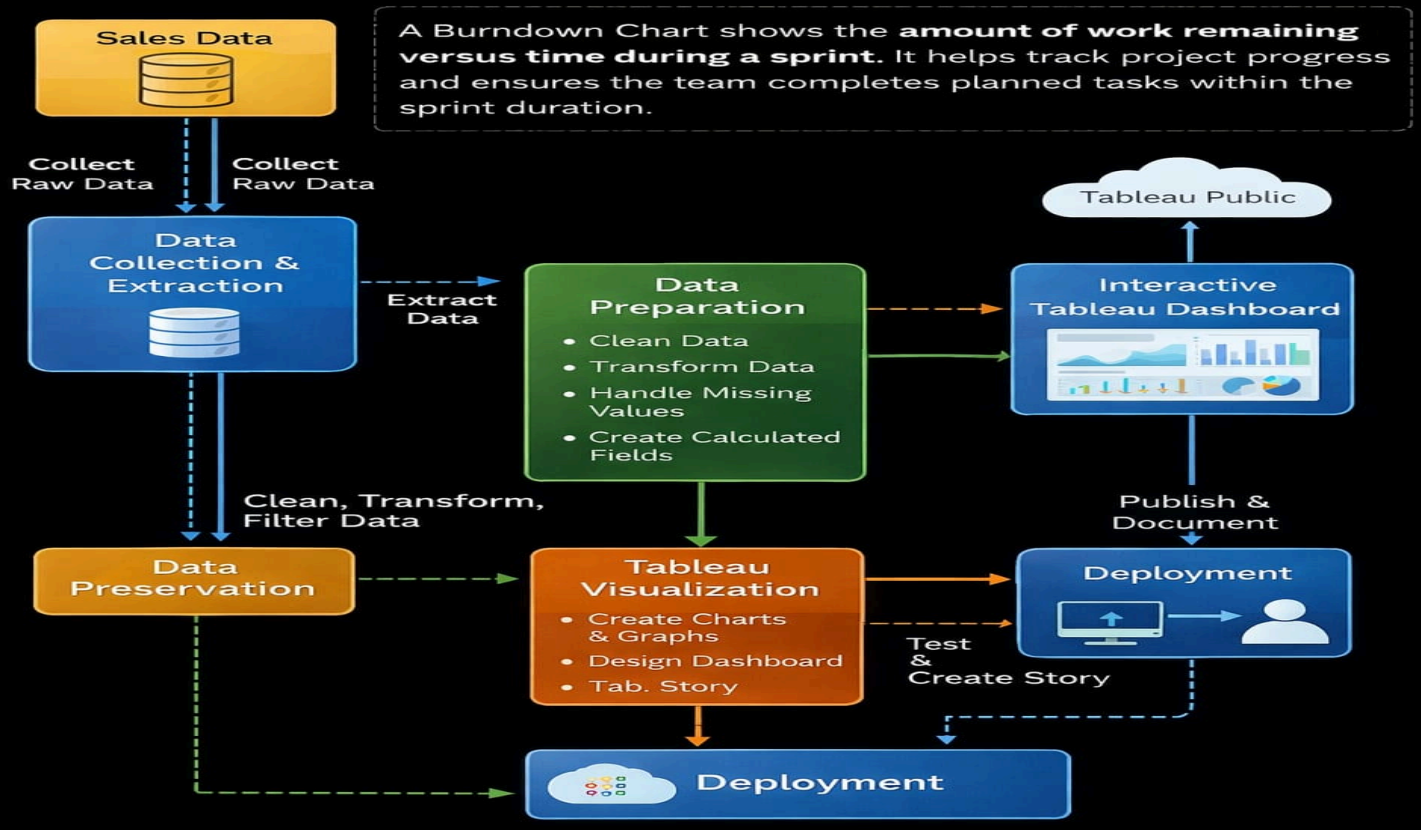
Strategic Product Placement Analysis: Unveiling Sales Impact with Tableau Visualizzation



User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Business Analyst	Sales Dashboard Creation	USN-1	As a business analyst, I want to create an interactive sales dashboard in Tableau so that I can analyze overall sales performance.	Dashboard displays total sales, profit, and quantity with filters.	High	Sprint-1
Sales Manager	Regional Sales Analysis	USN-2	As a sales manager, I want to view sales by region so that I can identify high and low performing areas.	Region-wise sales chart is displayed correctly with drill-down option.	High	Sprint-1
Sales Manager	Product Performance	USN-3	As a sales manager, I want to analyze product category performance so that I can improve low-selling products.	Category-wise sales and profit chart available.	Low	Sprint-2
Marketing Team	Customer Segmentation	USN-4	As a marketing team member, I want to segment customers based on purchase behavior so that I can plan targeted campaigns.	Customer segments displayed using filters and charts.	Medium	Sprint-1
Admin	Data Integration	USN-5	As an admin, I want to connect Tableau to sales database so that real-time data is updated automatically.	Data source successfully connected and refresh working properly.	High	Sprint-1
CEO	Profit Trend Analysis	USN-6 . .	As a CEO, I want to view monthly profit trends so that I can make strategic business decisions	Monthly trend line chart displayed accurately	High	Sprint-3
Finance Team	Discount Impact Analysis Discount vs Profit comparison chart available. Medium Sprint-3	USN-7	As a finance team member, I want to analyze discount impact on profit so that I can control unnecessary losses.	Discount vs Profit comparison chart available.	Medium	Sprint-3
